

HWP4

Project Notes

- Part 1
 - I took the top 100 key points from my equation.
 - Everything mostly seems right
 - The resulting images are in a key point images folder and the regular images are in original images folder.
- Part 2
 - For this part it was very confusing on what to return.
 - So I made a histogram with 2 different values, one with magnitude and one with orientation. Because in the handout it said to add up the gradient magnitudes for the histogram around the 11x11 square which is what I did. But I made both histograms show up with title.
 - I returned the histogram of gradient magnitude results.
 - Everything was normalized, reduced to .2, then normalized again.
- OTHER
 - I know its late but I am using my free late time to submit. I am submitting by 11:20.
